Which emerging technologies and materials will shape future housing?

We invite you on the **03rd of July** at **Living Places Copenhagen** for an inspiring and insightful evening dedicated to an exchange of thought about the technologies and materials that will shape the future of housing.

We aim to inspire and achieve deeper understanding of the technologies that can help us lower our carbon footprint and build homes that benefit both people and the planet.

The panel discussion, led by the esteemed moderator Sebastian Peck from KOMPAS VC, will feature young professionals who are driving change in the building industry.

After the panel discussion, we will open the doors to Living Places Copenhagen where you can visit the prototypes and experience a new approach to building homes.
